Irving College Baptist Church

LG webOS TV • App 1.0.1

Launcher: Irving College BC

Prepared October 20, 2026. Not a statement of LG certification.

Browser evidence is labeled; physical LG TV behavior remains unverified.

Document field	Value
Submission Date	Not yet submitted; prepared 2026 / 10 / 20
App Ver.	1.0.1
App Developer	Irving College Baptist Church icbcnextsteps@gmail.com

Table of Contents

1. Basic Information
2. Document History
3. Page Description / Live Playback Controls
4. Detailed Login Information — Not Applicable
5. Main Page Description — Home and Library
6. Sub Page Description — Flow, Privacy, Archive, Exit
7. Paid Content — Not Applicable
8. In-App Ad — Not Applicable

Appendix — Review window, evidence and unresolved checks

1. Basic Information

Area	Item	Input by Developer
App	App Title	Irving College Baptist Church; launcher: Irving College BC
App	Category	Life / Religion (selected by church)
App	File Type	Web — packaged HTML5 application
App	Optimized Resolution	1920 x 1080
App	Service Area	United States only (requested storefront territory)
App	Service Language	English
App	Geo-IP Block	No geo-IP blocking implemented in app; hosting restrictions not independently audited
App	SDK / Tooling	webOS TV Web app; official CLI 3.2.6. Exact launch-platform / SDK selection must match Seller Lounge.
App	In-App Ad / Paid Content	Neither; no advertising, login, purchase or subscription flow
App	Sound (Game Type)	Not a game. Sermon speech/audio; music excluded by church
Test	Service URL	Packaged IPK, not a hosted app URL. Media: https://live.irvingcollege.church
Test	Test URL	No separate test URL or activation. Use the uploaded 1.0.1 IPK and archive route.
Test	Service Platform	webOS TV. Individual chipsets: All for Web, per portal instruction.
Test	App ID / Contact	church.irvingcollege.icbc | icbcnextsteps@gmail.com

2. Document History

No.	Prepared / Sent	App Version	File Name	Contents
1	20 Oct 2026 / not submitted	1.0.1	ICBC-LG-UX-Scenario-v4.4-1.0.1	Completed LG v4.4 template; screenshots, controls, N/A sections, and honest test scope

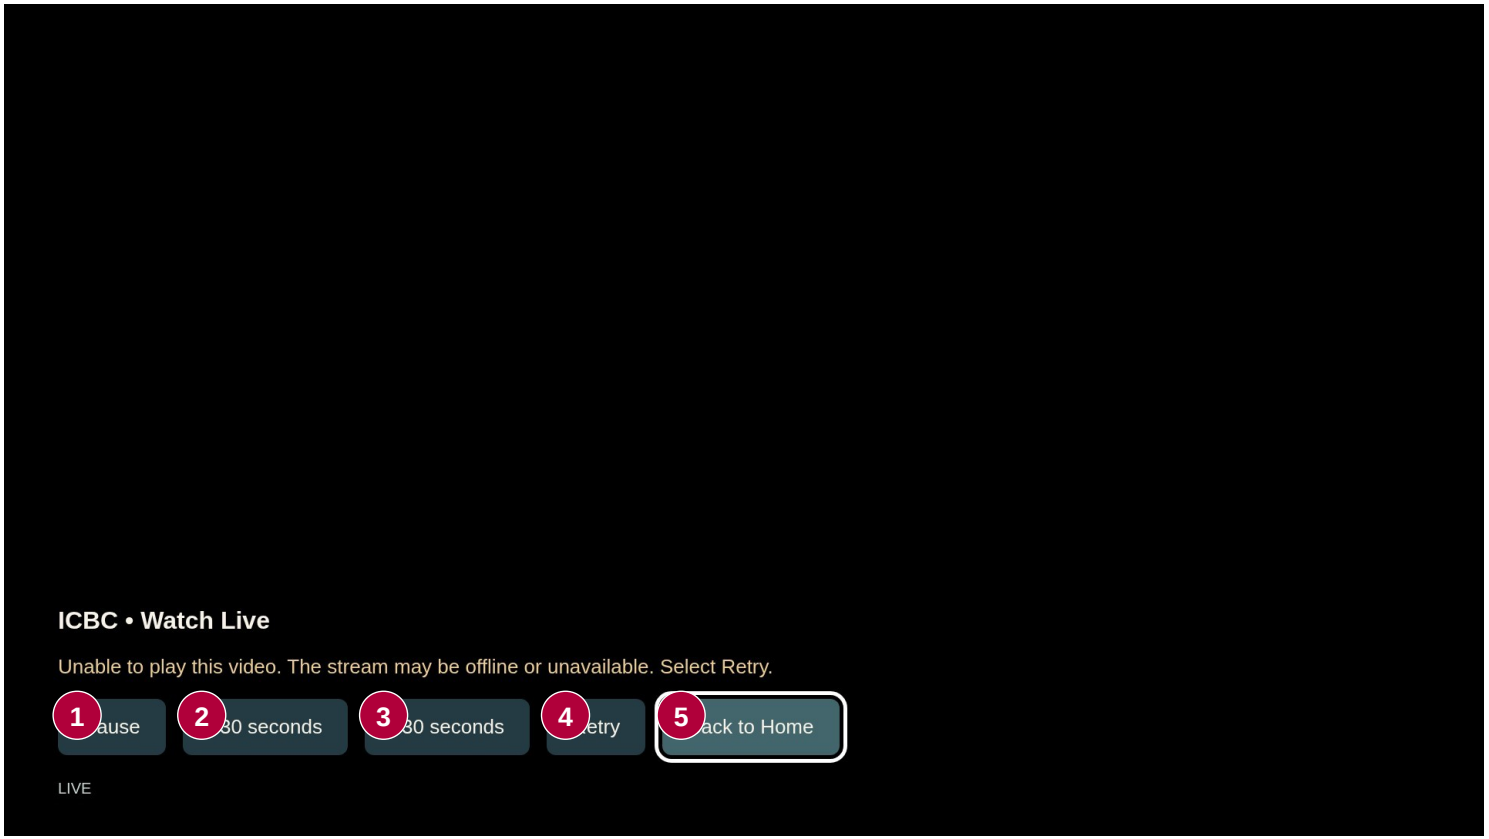

Reference: separate icbc-lg-webos project. Samsung app and production streaming server unchanged.

The church reported a successful visual launch of the earlier 1.0.0 build in Mac webOS26 Simulator. This does not establish playback or physical TV compatibility.

Version 1.0.1 adds a branded splash and a local Privacy & Support screen; 30 automated tests pass.

3. Page Description

Live player and recovery controls

Description	
1	Pause / Play: toggle playback when available.
2	Rewind: disabled for livestream.
3	Fast-forward: disabled for livestream.
4	Retry: reconnect the selected stream.
5	Back to Home: close media and restore home focus.

Detailed Information

Captured in Chromium with a deliberately aborted media request. This is the actual error UI, not proof the production stream is offline.

Only Sunday worship is streamed, starting 10:30 AM U.S. Central Time (America/Chicago). Duration varies.

For unavailable or stalled playback, the app shows a recovery message. Retry uses the same URL; no sign-in is required.

4. Detailed Login Information

Not Applicable — no login

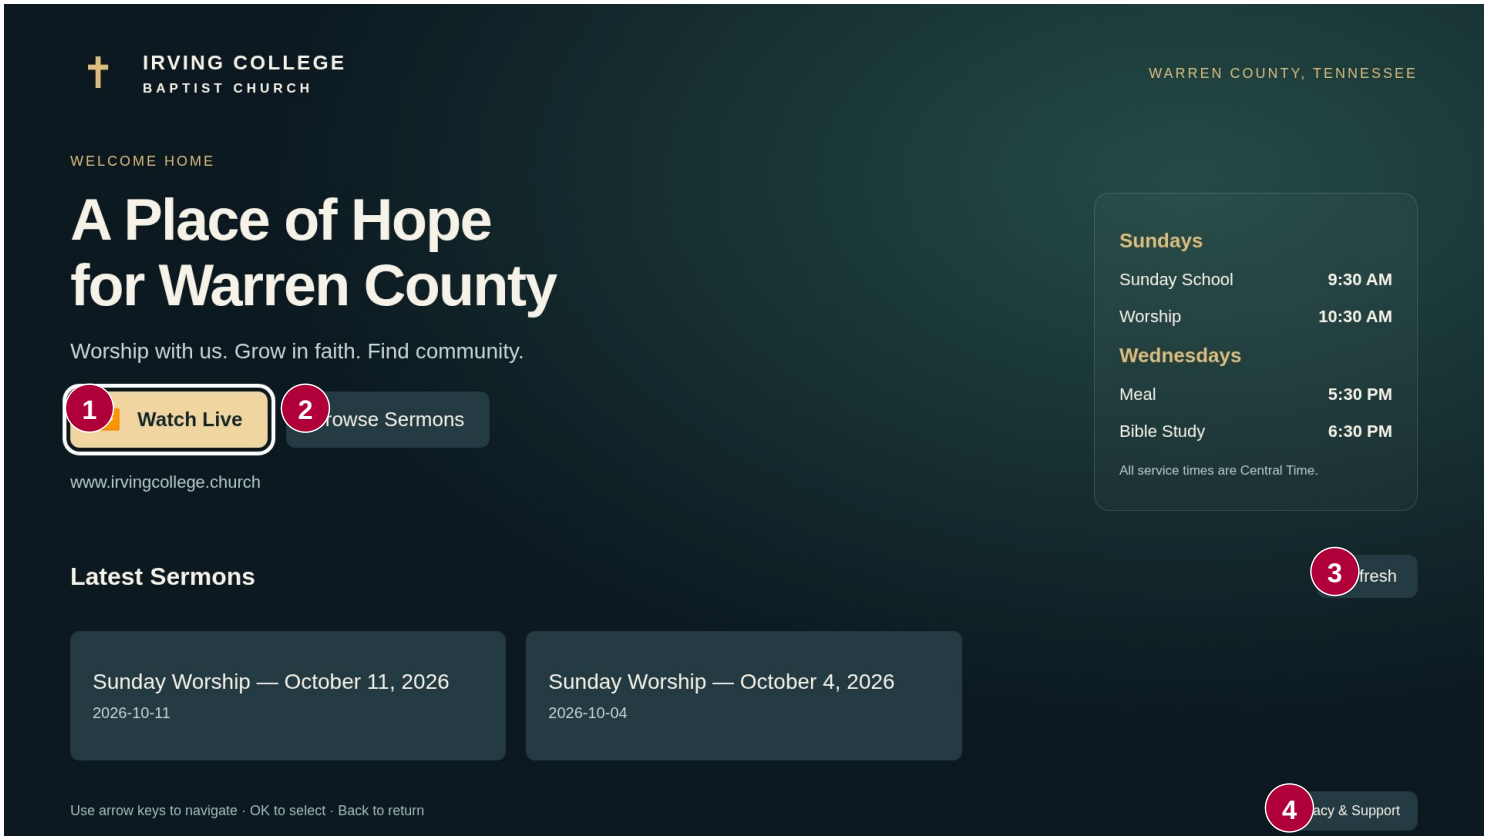

All catalog and playback controls are available without an account.
No test IDs, passwords, activation codes or device registration are required.
Internet access is required to request the church catalog and media.
Use recorded sermons for review outside the Sunday broadcast window.

Detailed Information

This section is not applicable to the actual app; no sample credentials, payment data or advertising examples are included.

5. Main Page Description

1. Home / entry page

	Description
1	Watch Live: opens the church livestream.
2	Browse Sermons: scrolls to the archive and focuses the first sermon.
3	Refresh: reloads the catalog; keeps prior entries if request fails.
4	Privacy & Support: opens the local policy/contact screen.

Detailed Information

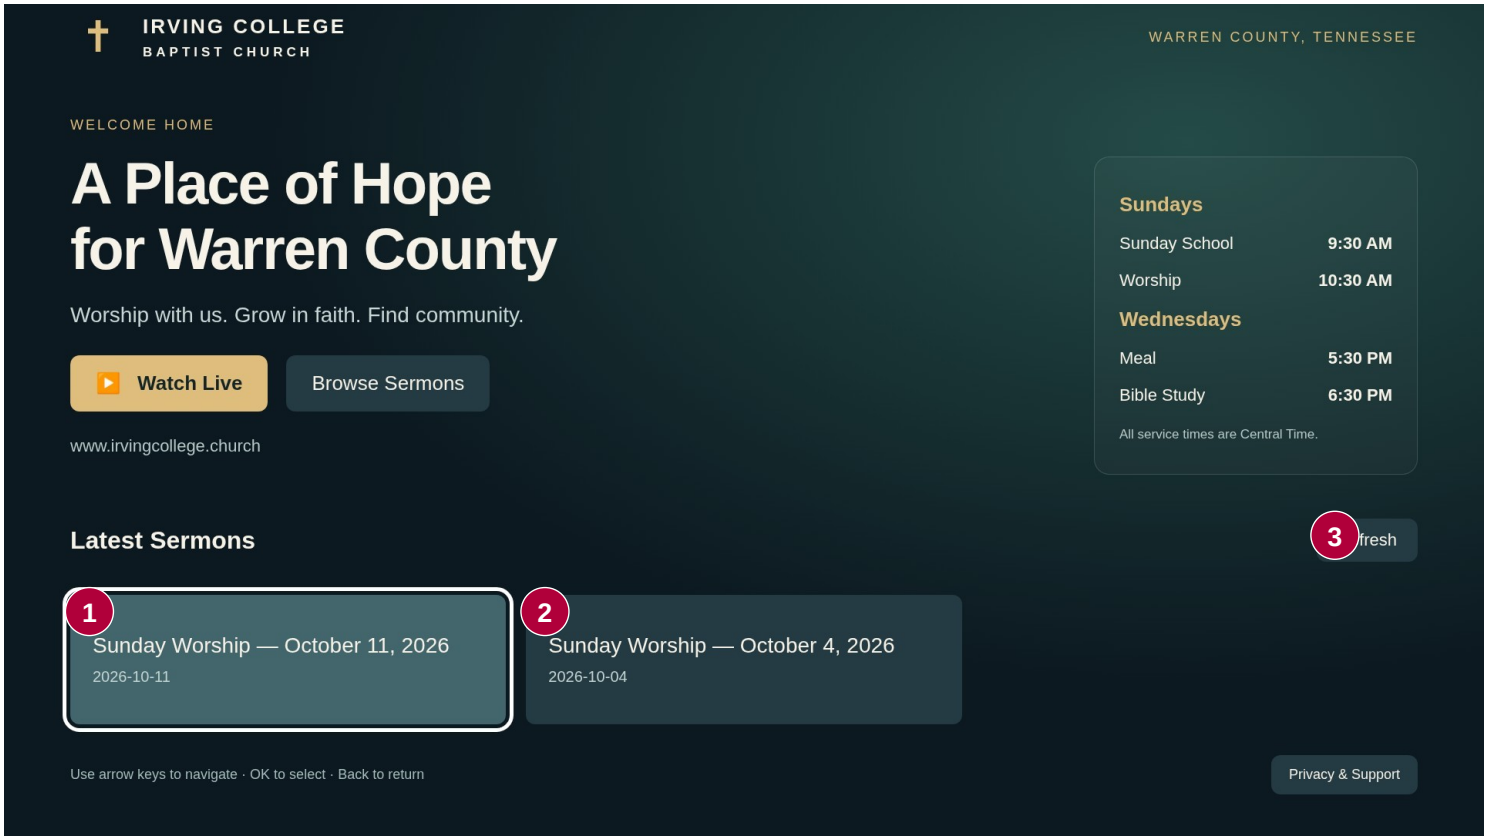

The page shows church branding, service times and sermon cards. The original Samsung visual design and content URLs are retained.

Arrows move focus; OK activates. Pointer movement focuses controls; click activates. The wheel scrolls naturally.

Screenshot uses an authentic production catalog snapshot through request interception, so it does not verify production CORS.

5. Main Page Description

2. Recorded sermon library

	Description
1	First sermon card: select to open its video.
2	Second sermon card: select to open its video.
3	Refresh: request the latest server catalog.

Detailed Information

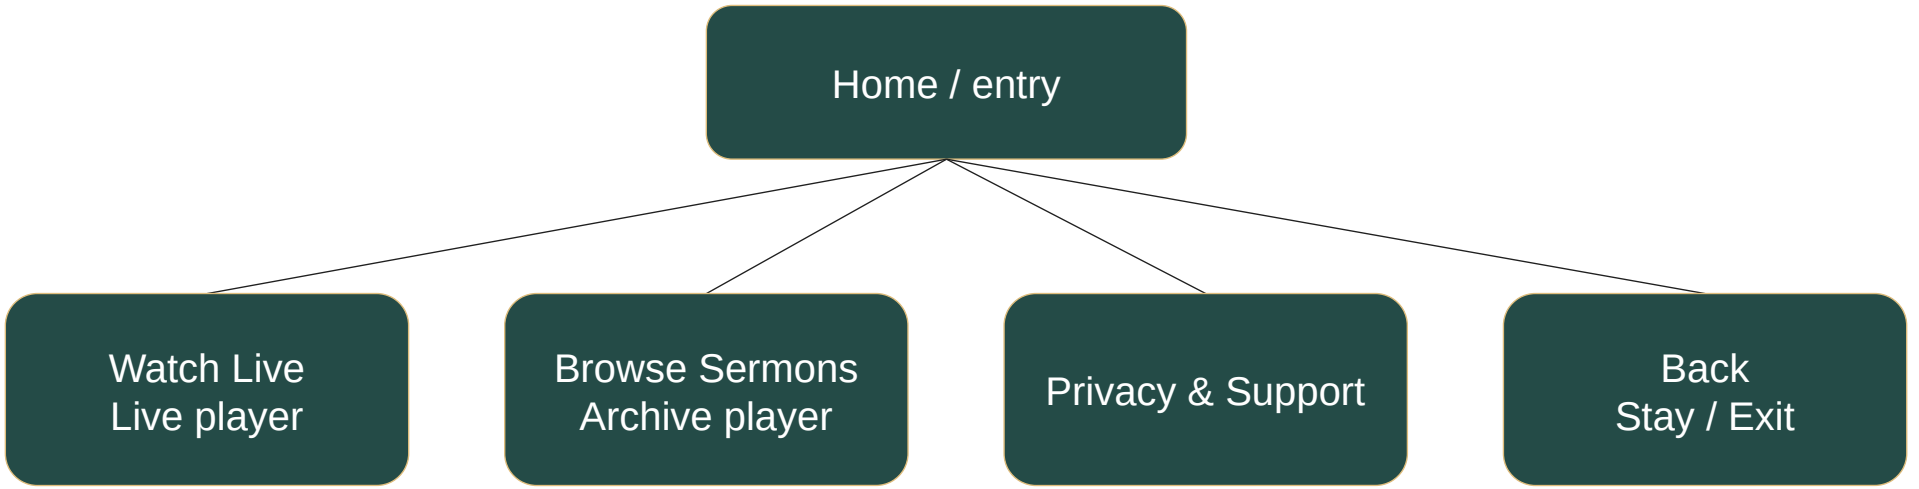

The server controls catalog order. Longer catalogs scroll; titles and metadata are inserted as text.

Back from a scrolled library returns to the home position and Watch Live focus. Playback Back restores the selected sermon card.

The two displayed records come from the captured production catalog. No production sermon playback was verified.

6. Sub Page Description

1. Navigation flow

Player → Back / Stop → Home with restored focus

Privacy → Back → Home | Exit dialog → Stay → Home

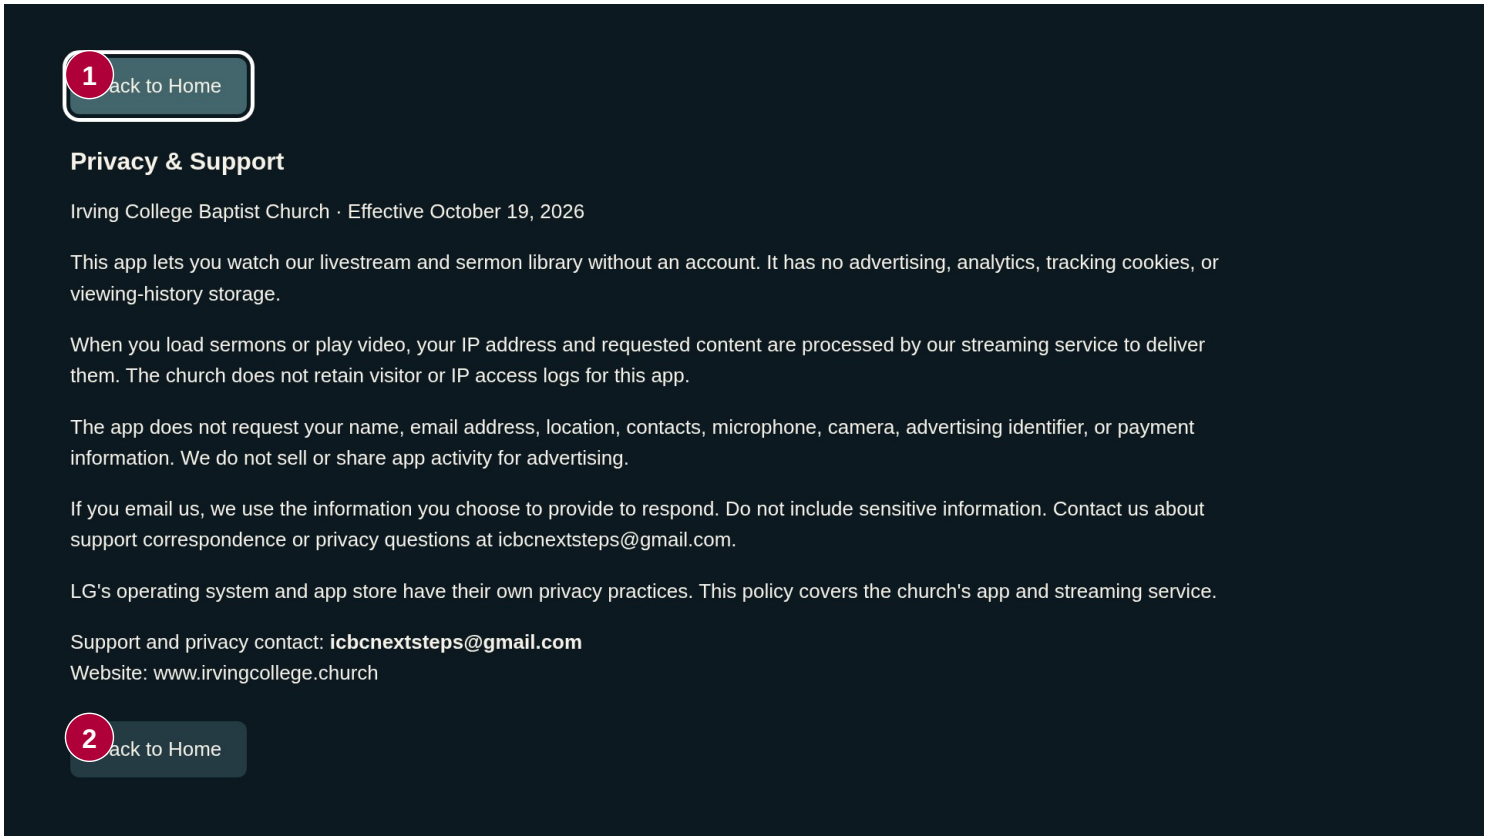

Detailed Information

No account or purchase route exists. Retry reopens the selected media; Refresh requests the catalog again.

At entry this candidate uses a custom exit confirmation. Confirm model-specific LG Back requirements before final submission.

6. Sub Page Description

2. Privacy & Support

Description	
1	Back to Home: return to the home footer control.
2	Bottom Back to Home: same return action after reading the notice.

Detailed Information

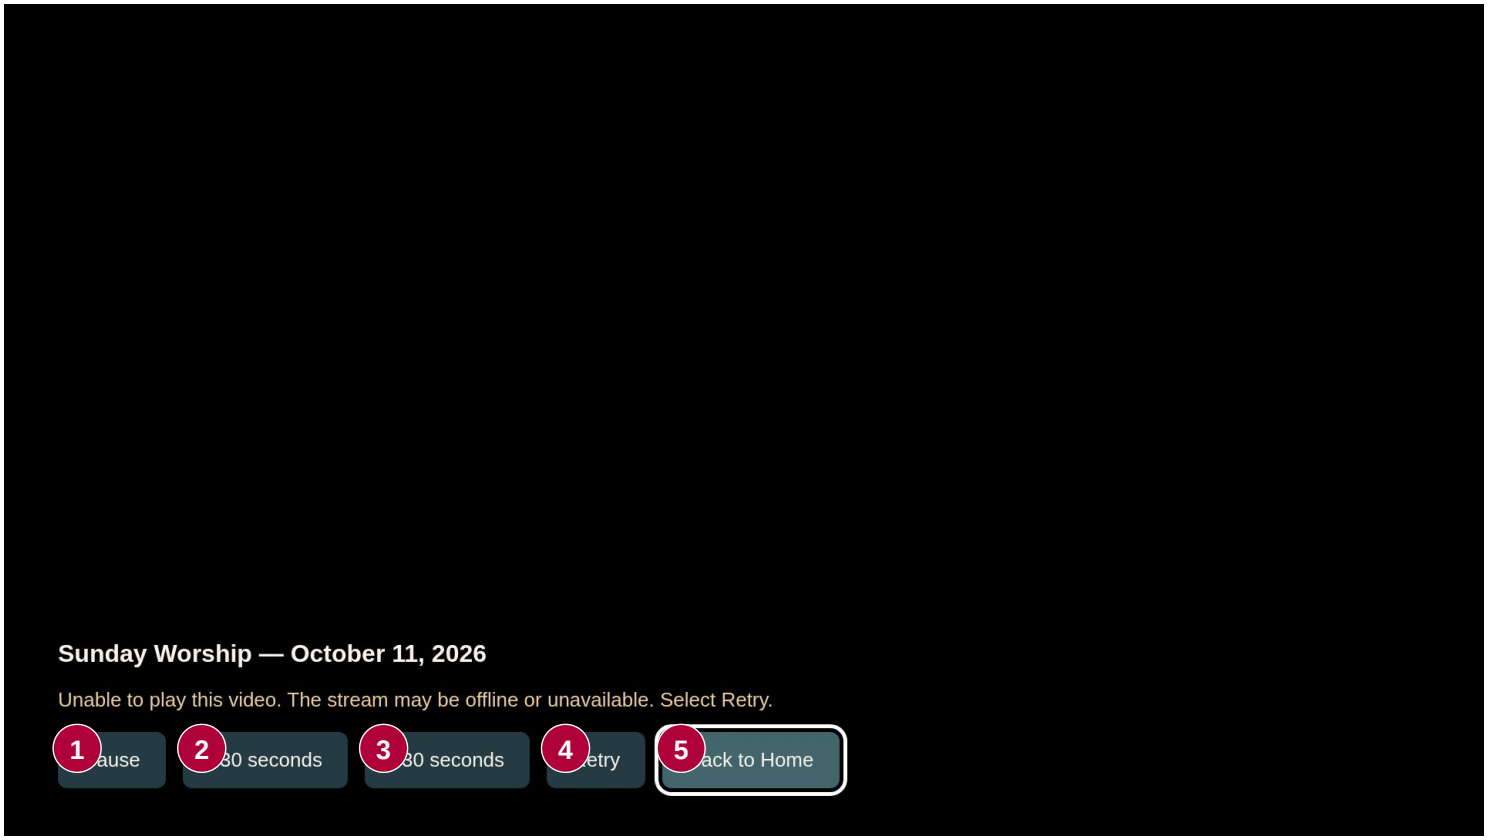

Support and privacy contact: icbcnextsteps@gmail.com. The church confirms no retained visitor/IP access logs.

Ordinary network data is processed transiently to deliver content. No ads, analytics, accounts or viewing-history storage are implemented.

Remote Back returns home and restores focus. The public policy is in the repository at docs/privacy-policy.md.

6. Sub Page Description

3. Archive player and recovery

Description	
1	Pause / Play: toggle the recorded video.
2	Rewind: seek back 30 seconds.
3	Fast-forward: seek ahead 30 seconds.
4	Retry: reopen the selected sermon URL.
5	Back to Home: release media and restore the sermon card.

Detailed Information

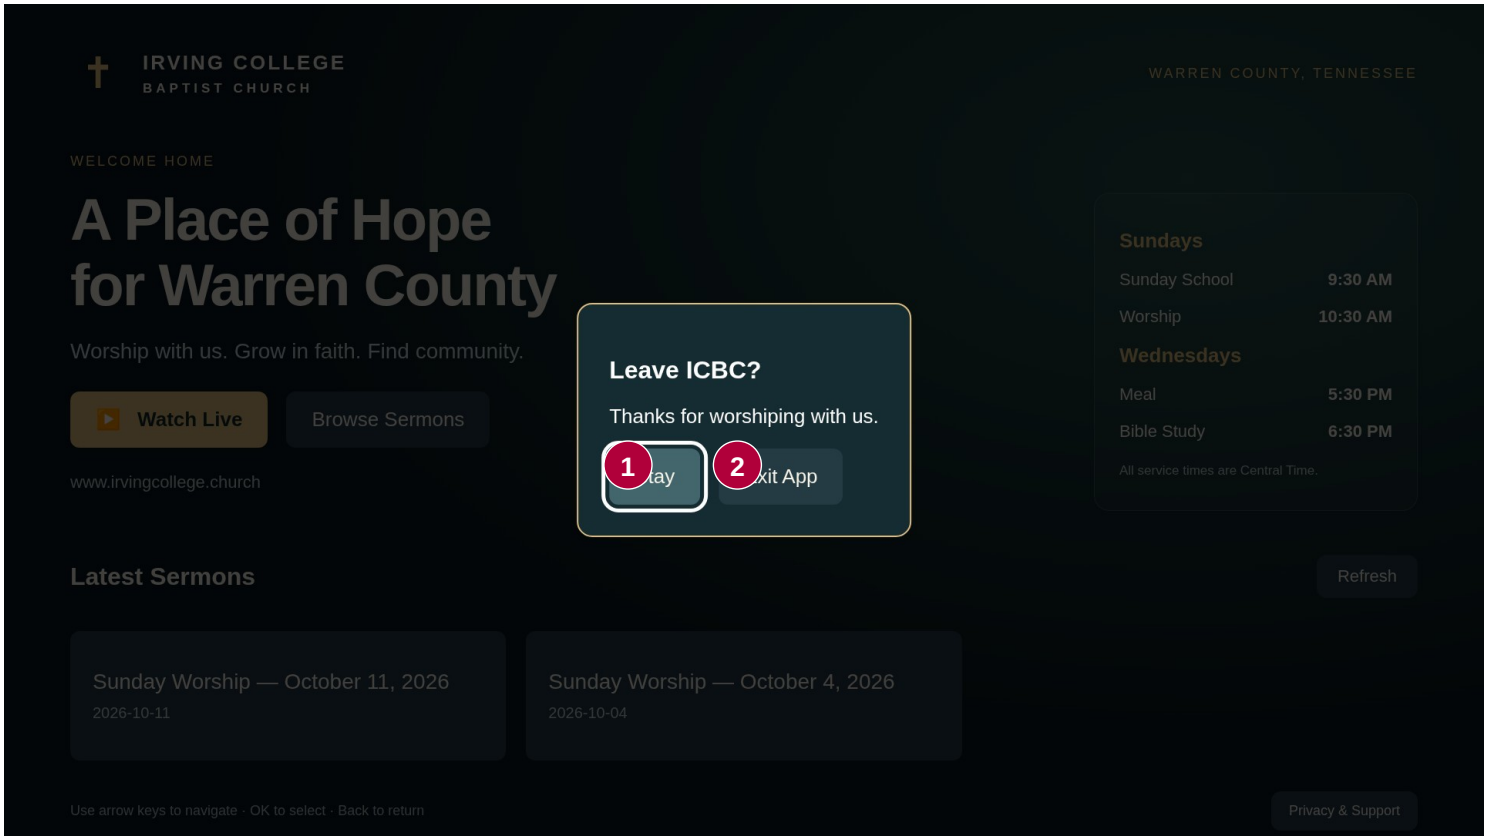

Captured with a controlled aborted media request to show recovery and available archive controls. It is not successful production playback.

Dedicated media keys are supported where available; visible buttons provide the same functions. Stop returns home.

Actual MP4 playback, audio, seek ranges, end/replay and network recovery remain physical-device tests.

6. Sub Page Description

4. Entry-page exit confirmation

Description	
1	Stay: dismiss the dialog and restore Watch Live focus.
2	Exit App: request closure using the webOS runtime.

Detailed Information

Back from the home entry page opens this candidate’s custom confirmation. The backdrop blocks underlying pointer controls.

Back dismisses the dialog; arrow keys are scoped to it. Native window closure is not proven by browser tests.

Review the webOS23–25 Home requirement in LG’s current self-checklist alongside its general Back guide before selecting those model groups.

Not Applicable — free content

The app has no purchases, paid subscriptions, vouchers, billing SDK or payment method.

No credit-card or payment test data is required for QA.

No separate payment or account activation is required on the church website to use the app.

Detailed Information

This section is not applicable to the actual app; no sample credentials, payment data or advertising examples are included.

1. Banner advertising — Not Applicable

The application has no banner advertising, ad slots or advertising SDK.
The church confirms music is excluded from its broadcasts for rights reasons.
No advertisement test account or ad-fill configuration is applicable.

Detailed Information

This section is not applicable to the actual app; no sample credentials, payment data or advertising examples are included.

2. Video advertising — Not Applicable

The app has no preroll, midroll, postroll, rewarded ads or video advertising integration.
Video is requested from the church’s HTTPS media host.
HLS.js is bundled locally for playback fallback; it is not an advertising or analytics SDK.

Detailed Information

This section is not applicable to the actual app; no sample credentials, payment data or advertising examples are included.

[Appendix] Reviewer availability and evidence

Broadcast: Sunday worship only, starting 10:30 AM U.S. Central Time. The ending time varies; use archives outside this window.

Contact: icbcnextsteps@gmail.com | Territory: United States only | Language: English

Catalog: https://live.irvingcollege.church/sermons/catalog.json

Live HLS: https://live.irvingcollege.church/hls/stream.m3u8

30 automated tests pass. HTML video/HLS fixtures and adapter mocks are tested; these are not physical LG TV results.

All document screenshots are Chromium captures of app 1.0.1. Catalog bytes are a real snapshot; player images deliberately exercise error UI. No synthetic video is depicted as church content.

Church representative confirms sermon distribution rights, music exclusion and no visitor/IP log retention. Full content/rating questionnaire remains the publisher’s responsibility.

[Appendix] Remaining validation before submission

Physical LG TV testing has not been performed: native live/archived playback, remote hardware, TV exit and lifecycle still need validation.

Production catalog CORS remains open: the read-only catalog response lacked Access-Control-Allow-Origin. No production server configuration was changed.

Recheck the updated 1.0.1 build in the Mac simulator; only the earlier build’s appearance was reported by the church.

Confirm Seller Lounge launch-platform / SDK selection and target models. The app is a Web package, not a chipset-specific native binary.

Transfer actual results into LG’s official self-checklist. This UX scenario is not that separate form.

Public policy: https://github.com/irvingcollege/icbc-lg-webos/blob/main/docs/privacy-policy.md

Prepared from the church-supplied UX Scenario v4.4 template. Submission date is deliberately unclaimed until the publisher actually submits.
